AMSSM - Testing
The Perinatal Quality Foundation was created to educate providers on how to obtain reproducible Nuchal Translucency measurements, 2) provide a method to evaluate and track provider proficiency and 3) provide on-going NT quality review.

Cervical Length Education and Review Program - Foundation
Background: Hemorrhagic ovarian cysts (HOCs) are commonly seen in clinical practice. Most of them disappear spontaneously with follow-up except in minority of cases in which surgical intervention is stated. Our aim in this study was to review the cases diagnosed as having HOCs in our hospital and clarify the clinical and sonographic features of both surgically and conservatively managed patients.

Figure 2: Transabdominal ultrasound in a transverse plane showing bladder, uterus and right ovary. Illustration 2: Drawing of corresponding anatomy. Once the endometrial stripe is identified, the uterus is scanned from cervix to fundus in the transverse plane. Finally, although not often visualized in the transabdominal ultrasound, the ovaries are located by sweeping laterally from the uterus.

OB/GYN Pelvic Ultrasound in Early Pregnancy
General Prerequisites Prerequisite 3A Note: All listed items must be met and completed prior to submission. See the Notes About the Prerequisites on page 11 for footnotes, definitions and complete details.

ARDMS General Prerequisites
Medical ultrasound (also known as diagnostic sonography or ultrasonography) is a diagnostic imaging technique based on the application of ultrasound. It is used to create an image of internal body structures such as tendons, muscles, joints, blood vessels, and internal organs. Its aim is often to find a source of a disease or to exclude pathology. The practice of examining pregnant women using ...

Chest Ultrasound Sonography is complementary to chest radiography and CT in the evaluation of pathologic processes in the thorax. US commonly reveals abnormalities not shown by other imaging methods (Fig. 12.1) [1,2 and 3]. Although limited by air and bone, US visualization is made possible by the pathologic processes creating a sonographic window.

As ultrasound became a widely available and popular investigation, it contributed heavily to several population screening programs that took place between the late 70's and the 90's. The first was the Maternal serum alpha-feto protein (MSAFP) screening programs for the detection of neurotube defects (NTD). It started in the United Kingdom in the late 1970s, notably in parts of Scotland, where ...
