Cost Volume Profit Analysis Problems and Solutions I ...
You will make three sales and earn $8 in profit on the first sale ($16 - $8) and $8 in profit on the last two sales (2($12 - $8)) for a total profit of $16. Total profits under perfect price discrimination are $8 + $6 + $4 + $2 + $0 = $20, so this strategy would lead to an extra $4.

Chapter 11: Answers to Questions and Problems
Since Airbus optimally uses fewer workers than Boeing, and profit-maximization entails input usage in the range of diminishing marginal product, it follows that the lower quantity of labor used by Airbus translates into a higher marginal product of labor at Airbus than at Boeing. Table 5-3 provides some useful information for making your decision.
