An essential ethical condition for a randomized clinical trial comparing two treatments for a disease is that there be no good reason for thinking one is better than the other. 1, 2 Usually, investigators hope and even expect that the new treatment will be better, but there should not be solid evidence one way or the other. If there is, not only would the trial be scientifically redundant, but ...

NEJM -- The Ethics of Clinical Research in the Third World
The currently available resources are listed below. ... About us. At NHMRC we are excited by the huge potential benefits of the research we fund and by the opportunities we have to ensure Australians have access to evidence-based, authoritative health advice.

Ethics or moral philosophy is a branch of philosophy that involves systematizing, defending, and recommending concepts of right and wrong conduct. The field of ethics, along with aesthetics, concerns matters of value, and thus comprises the branch of philosophy called axiology.. Ethics seeks to resolve questions of human morality by defining concepts such as good and evil, right and wrong ...
